Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New isolated human Ras-like protein polypeptide, useful for diagnosing, treating or preventing inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS, cancer, allergies, anemia, asthma corresponding relates to human Ras-like protein and its Claim 4; Page 73-74; 82pp; English invention or stroke.

nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and treatment of infolammation and disorders associated with cell proliferation and apptosis, e.g. AIDS and other infectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheimer's disease, Parkinson's disease, washing disease e.g. cachaxia, ischaemic injuries e.g. myocardial infarction, stroke or reperfusion injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, crohn's disease, diabetes mellitus, atherosclerosis, allemation including allergies, atopic dermatitis, untiple sclerosis, osteoarthritis, pandrome, lupus erythematosus, multiple sclerosis, osteoarthritis, pandrome, uveitis, rauma, or viral, bacterial, fungal, parastic, protozoal or helminthic infections. The antibodies of the invention are useful in pharmacogenomic analysis or for tissue typing. The transgenic animals are useful for studying the function of a Ras-like protein, and identifying and evaluating assays and its activity. Ras-like protein is used in drug screening assays and its bNA is used in gene therapy. The present esquence is human Ras-like protein agence of human encoding cDNA

HUMAN GENOME (HUMA-) Ruben SM Barash SC, Rosen CA,

NPI; 2001-483426/52

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 37097; 3071pp + Sequence Listing; English

amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic activity, and can be used in gene therapy and vaccine production. (1) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to polymucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the

The invention relates to human Ras-like protein and its corresponding nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and treatment of inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS and other infectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheimer's disease, Parkinson's disease, wasting diseases e.g. cachexia, control injuries e.g. myocardial infarction, stroke or reperfusion injury, toxin-induced diseases such as alcohol-induced liver damage or cirrhosis, osteoporosis or cancer. They are also used to treat disorders associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, graves eighease, glomerulomephritis, gout, irritable bowel syndrome, clupus erythematosus, multiple sclerosis, osteoarthritis, pancreatiis, autoimmune thyroiditis, rheumatoid arthritis, Sjogren's syndrome, clupus erythematosus, multiple sclerosis, osteoarthritis, gandrome, cuestul for studying the function of a Ras-like protein in udentifying and evaluating modulators of its activity. Ras-like protein is used in drug screening assays and its DNA is used in gene therapy. The present and characters in human Ras-like protein gene is located at New isolated human Ras-like protein polypeptide, useful for diagnosing, treating or preventing inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS, cancer, allergies, anemia, asthma /*tag= ae /standard name= "Single nucleotide polymorphism" replace(28096,G) /standard_name= "Single nucleotide polymorphism" /*pplace(20467,G) /*tag= ah /standard_name= "Single nucleotide polymorphism" _name= "Single nucleotide polymorphism" /*tag= ad /standard_name= "Single núcleotide polymorphism" replace(28071,T) "Single nucleotide polymorphism Beasley EM Claim 4; Page 74-81; 82pp; English. /*tag= ac /standard_name= " replace(26472,G) name= replace (26465, A) $replace (2\overline{8}403,G)$ Ye J, Di Francesco V, 27-MAR-2002; 2002WO-US009328 27-MAR-2001; 2001US-00817198 /*tag= af /standard_n WPI; 2003-018913/01. variation

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1696 GAGCATTTGGAAATGAAGGACTAGCTCCTATGTATCAGGTTAAGAGCAAGGGAGAGCTGG 1755

C (NM 002538), TXNRD1 (NM 003330), UGT8 (NM 003360), MRD (NM 004996, NM 019900, NM_019901, NM_019902, NM_019862, NM 019898, NM 019899) and their complementary sequences, or a sequence (S1) chosen from 87 sequences and their complements. The chemical pretreatment is bisulphite treatment to convert cytosines (but not methyl-cytosines) into uracils. The office of the chemical pretricular an oligomer or a peptide nucleic acid (PNA)-oligomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is peptide nucleic acid (PNA)-oligomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is included and their complements, arranged in an array for analysing diseases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The oligomers may also be used as PCR primers. The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence represents one the 87 DNA continuous and cancer. The present sequence represents one the 87 DNA continuous problement directly from WIPO at a continuous or its complement. Note: The sequence data for this patent did continuous into the printed specification, but was obtained in the proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of proposition of propositi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7263

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, nevosacular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

```
amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the perpetude. The polypeptide is also useful for identifying a binding partner and determining whether the binding partner of feeters an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administraing the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility or a pathological condition or susceptibility or a pathological condition or susceptibility to a pathological condition or susceptibility or a pathological condition or susceptibility or a pathological condition or susceptibility or a pathological condition and an antibody to the polypeptide are useful as adjuvants to enhance immune responses, and as agents to induce higher a filinity antibodies and increase serum immunoglobulin concentrations. The present sequence represents cDNA encoding a novel human protein. Note:

The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence the necessity and a pathological condition and an electronic form the transfer of the printed sequence the necessity and an electronic format direct from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               segdata.uspto.gov/seguence.html?DocID=20020168711.

                                                                                                                                                                                                                 8 8 8
                                                                                                                                                                                                                                                                                       g
                                                                                                           The invention relates to an isolated polynuclectide (I) comprising one of 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising daministering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).

(I), (II) and (III) are useful for diagnostic evaluation of disorders.

(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabettes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

This invention describes novel polypeptide fragments (I) and the polynucleotides (II) that encode them that are highly expressed in a human bladder tunnour and which have cytoateatic activity. (II) are used for recombinant expression of (I) and to isolate complete genes. (I) are directly treat this form of cancer (including expression from gene therapy vectors) or are used in a preparation for cancer treatment. (I) is also used for the generation of specific antibodies. (II) are identified by assembling BSTs (expressed sequence tags) from a particular issue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, and therefore reduces the number of failures associated with the fact that ESTs from

```
The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the pathological condition based on the presence or amount of expression of the pathological condition based on the presence or amount of expression of the pathological condition or a susceptibility to a pathological condition which involves contacting the polypeptide with a binding partner and determining whether the binding pathological condition, which involves administering the polypeptide is useful for preventing the polypeptide is useful for preventing the polypeptide is useful for preventing the polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, which involves determining the pathological condition in a subject, which involves determining the pathological condition or susceptibility to a pathological condition or based on the presence or absence of the mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful for treating autoimmume disease, Parkinson's disease, silicosis, gastrointestinal disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, can add and an antibody to the polypeptide are useful for the atline and an antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce higher effinity antibodies and increase serum immunosuppressive or induce data for this patent did not form part of the printed specification but was obtained in electronic format direct from USPTO at sequence the presence or the printed or specification but was obtained in electronic format direct from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 566 BP; 140 A; 145 C; 172 G; 103 T; 0 U; 6 Other;

                                                                                                 The invention relates to polynuclectides encoding colon tumour proteins. The polynuclectides and encoded polypeptides are useful in pharmaceutical compositions, such as vaccines, for the diagnosis, prevention, and treatment of Colon cancer. Polynuclectide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer. ABK44450-ABK46237 represent. Coding sequences of human colon tumour proteins of the invention. Note: With the exception of SEQ ID No 1 and 2, the sequence data for this patent did not form part of the printed specification but was supplied by the European Patent Office
